

Drilling and Well Services Leader Digitizes Data Capture, Cuts Forms Completion Time by Two-Thirds, Creates Operational Efficiencies

Client

- Multi-national drilling and well services company

Solution:

- Lone Worker Monitoring
- Real-Time Documentation
- Process improvement consulting

Benefits:

- Consolidation of forms
- Smarter workflows
- Improved forms completion and submission rates
- Real-time communication and worker location awareness
- Improved decision making

The Challenge:

Our client had experienced a number of acquisitions resulting in numerous (often duplicate) forms, and processes that differed across geographical locations and business lines. They could not readily see where their workers were and what projects they were working on.

Field Safe's Solution:

Field Safe was chosen to perform a review of existing forms and processes. Our Lone Worker Monitoring and Real-Time Documentation solutions were implemented to enable digital completion of forms from mobile devices, instant access to reference documents, and provide the ability to communicate across teams and know worker locations... all in real-time.

Results and ROI:

Forms were reduced through consolidation, new custom forms created, and smarter, more efficient workflows introduced. By digitizing forms, our client estimates a savings of over 1100 completion hours per year ... for each of its 31 forms!

Next Steps:

Our client has just begun to scratch the surface of the opportunity real-time access to data creates for creating operational efficiencies. As a trusted advisor, Field Safe is helping to identify and recommend additional ways to optimize our client's investment in our technology.

"Digitization of our existing forms has reduced the time to complete by over 2/3rds. We expect this single form will save over 1100 man-hours per year. As well, the data is available real-time for better decision making and further operational efficiencies."

Global Director HSE, Multi-national Drilling & Well Services Company

Reduced forms completion time. Increased forms completion rate. Improved decision making through real-time access to data.
