

## Land Management Company Connects Workers, Sees Improved Forms Completion Rates, Safety Program Compliance and Access to Real-time Field Data

### Client:

- Western Canadian land management company.

### Solution:

- Lone Worker Monitoring
- Real-Time Documentation

### Benefits:

- Increase in forms completion and submission rates
- Real-time access to field data
- More effective team scheduling
- Improved safety compliance
- Better understanding of worker location and status of their activities

### The Challenge:

Our client, a veteran Canadian land management company, was looking to improve completion of required daily reporting by its Field Agents and to improve compliance with its corporate safety program. They also needed to know where their agents were at any time, anywhere and the status of their activities.

### Field Safe's Solution:

Field Safe's Lone Worker Monitoring and Real-Time Documentation solutions were chosen to connect workers and facilitate real-time data sharing and communication between the field and head office. Our client now has instant awareness of worker location, their status, and activities they are engaged on.

### Results and ROI:

Ease of use drove quick adoption of the mobile enabled technology resulting in much higher completion rates and improved daily reporting and safety program compliance. Head office can now readily see where team members are and what they are working on, which has improved team scheduling as well as reporting to clients.

### Next Steps:

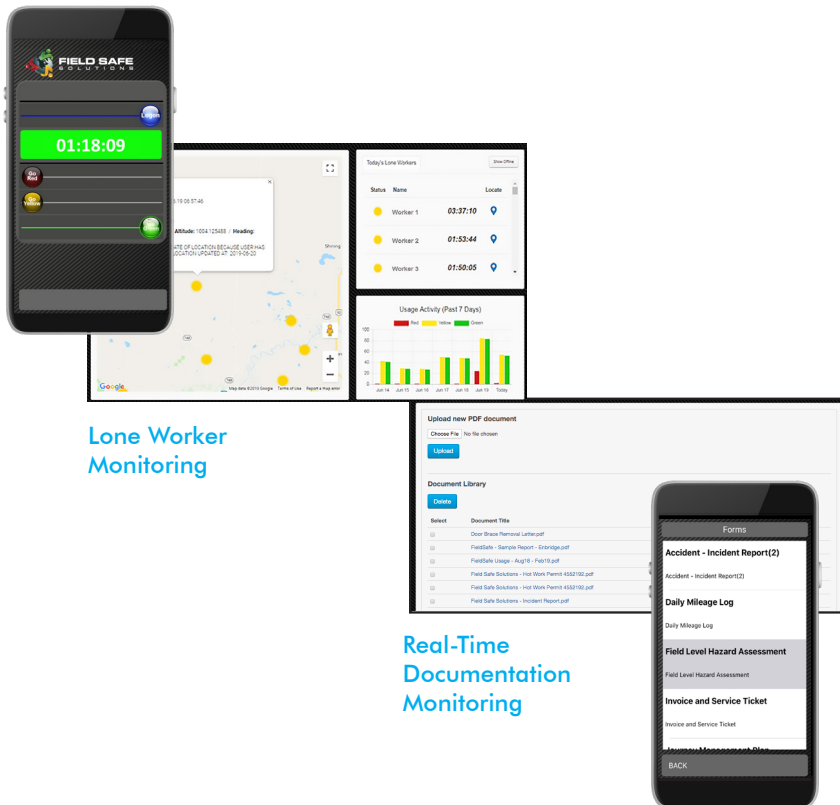

The real-time access to data creates many opportunities for operational efficiencies. In our role of trusted advisor, Field Safe is helping our client manage that data to drive additional operational efficiencies that lower costs and improve safety.

*“Before Field Safe, we had a constant struggle to get the Field Agents to complete the required daily reporting. Now with Field Safe, we have a much higher rate of compliance which yields better information. Getting the information real-time from the field, as opposed to days later, has made a significant difference to our operation.”*
