Prioritize Asset Maintenance with Geofencing

Are you operating by priority using data to inform your decisions? Geofencing enables the real–time sharing of information on the status and performance of your assets so that as need arises, you can cost effectively deploy the right team members to perform corrective actions.

Field Safe provides instant awareness of your workers' location and their qualifications so that you can schedule maintenance based on need and deploy the closest, most qualified workers. Our application uses GPS identifiers to create virtual geofences around a selected location. These identifiers connect to our easy-to-use software to instantly advise you on worker check-in, projects they are actioning, and check-out. Field safe helps improve field worker safety, creates operational efficiencies, and allows you to operate by priority.

- **Immediately Understand Worker Location.** GPS coordinates and smarter workflows notify managers of worker check-in and check-out of a geofenced area, ensuring you know who is at your sites each day.

- **Use Data to Schedule Site Visits and Maintenance.** Data is integrated into your asset maintenance systems, providing information like well production levels and allowing you to recognize deficiencies that may signal a site visit and / or maintenance is required.

- **Effectively and Instantly Resolve Emerging Issues.** Because you know where your team members are and their certifications, you can easily and effectively deploy the right people to resolve priority issues as they emerge.

- **Easy-to-Use Data Capture.** Field Safe is fast and easy to use, operating on any mobile device. Our software immediately updates to provide information and data fields specific to the relevant geofence, eliminating the need to scroll through vast lists and making it simple to find and report on a particular asset or site.

> "
> **GPS identifiers connect to Field Safe's software, informing management in real–time about individuals at a particular geofenced location**
> "

"Geofencing allows you to make data driven asset maintenance decisions. Field Safe makes that fast and easy."

Cam Barrett, CEO of Field Safe Solutions

Geofencing allows you to understand the status and performance of assets, and as need arises, deploy the right team members to perform corrective actions

Geofencing: Additional Use Cases

- **Employee and Contractor Monitoring.** No more relying on a phone call. GPS breadcrumbs audit check-in, check-out, and how an individual's day was spent, while also tracking their safety certifications and training.

- **Ensure No Duplication of Effort.** Field Safe tells you when a site has been visited so you can ensure the required action is completed and eliminating a potentially duplicative visit by another team member which protects against additional costs like expensive windshield time.

- **Geofencing Supports Pandemic Protocol Compliance.** Check-in and check-out data identifies those who may be affected by a COVID-related incident. Real-time communication ensures they are notified quickly.

- **Ensure the People On A Site Have the Proper Certifications To Be There.** With Field Safe, you confidently know the people in a given geofence have the training and accreditation to safety be there.

Field Safe has a number of solutions designed to keep workers connected and safe, while optimizing your operations and lowering costs. **Learn more by visiting our website or call us at 1−800−497−7614.**

Lone Worker Monitoring – With Field Safe, your workers are never truly alone. Know where your people are; understand what they are working on; keep them safe and connected.

Real-Time Documentation – Easy data capture from any mobile device drives user adoption, faster completion of forms, and results in more accurate data being collected.

Journey Management – Assess and track your workers' journeys to identify the level of risk, mitigate potential in-transit threats, and quickly respond to incidents.

Safety Ticket Management – Manage and understand the status of your workers' certifications and training. Set up reminders to ensure their expertise is current.

Task Completion Workflow – Assign tasks, monitor progress, and see overdue items in real-time.

About Us

Founded in 2014, Field Safe Solutions is a cloud-based software as a service company. Our head office is in Calgary, Alberta. Our easy-to-use digital safety application and its smarter workflows methodology connect all workers, providing our clients with real-time communication and data capture and the peace of mind that their people are accounted for at any time, anywhere in the world.

Corporate Head Office:
Suite 1350, 707 7th Avenue SW
Calgary, AB T2P 3H6
