

FIELD SAFE
SOLUTIONS

Employee and Contractor Monitoring

How effective is your workforce monitoring? Understanding instantly the exact location and certifications of your employees and contractors will improve their safety while allowing you to better deploy them to resolve your highest priority business needs — simply, quickly and cost effectively.

Field Safe's easy-to-use safety application tells you immediately where your workers are... at home, the office, at site, or on the road. GPS breadcrumbs show their exact location and whether they have the necessary training and certifications to be there. Having this information lets you operate by priority, based on data versus best guess.

- **Monitor Check-Ins / Check-Outs.** GPS coordinates notify supervisors in real-time of worker location, check-in and check-out times, and the projects they are working on.
- **Deploy Your Workforce Based on Priority.** Geofencing provides immediate understanding of worker location and accreditations so you can deploy the closest and best suited workers to conduct maintenance that is scheduled based on highest need.
- **Verify Worker Certification.** Do away with inefficient and static spreadsheets and more efficiently track and manage your workers certifications and training to ensure they can perform their roles effectively and safely.
- **Simplify Contractor Management.** Immediately understand the qualifications of the contractors working on your job to reduce their risk and ensure you have the most-skilled people assigned to you.
- **Ensure Pandemic Protocol Compliance.** Digitally completed questionnaires are quickly and easily submitted with pre-determined actions automatically triggered by the responses provided.
- **Immediately Share Emergency Alerts.** In the event of an incident like a gas leak or weather event, teams in the area are immediately notified and provided direction.
- **Comply with Lone Worker Legislation.** Field Safe ensures you exceed all lone worker compliance regulations across all jurisdictions.

— “ —
No more relying on a phone call. GPS breadcrumbs audit check-in, check-out and how an individual's day was spent, while tracking their safety certifications and training.
— ” —

"Our system is so easy to use, we ship without a manual!"

Cam Barrett,
CEO of Field Safe Solutions

Monitor employees and contractors to improve their safety, enhance their productivity and lower operating costs.

Geofencing: Additional Use Cases

- **Prioritize Asset Maintenance.** Geofencing allows you to understand the status and performance of assets and, as need arises, deploy the right team members to perform corrective actions.
- **Ensure No Duplication of Effort.** Field Safe tells you when a site has been visited so you can ensure the required action is completed and eliminating a potentially duplicative visit by another team member which protects against additional costs like expensive windshield time.
- **Geofencing Supports Pandemic Protocol Compliance.** Check-in and check-out data identifies those who may be affected by a COVID-related incident. Real-time communication ensures they are notified quickly.
- **Ensure the People On A Site Have the Proper Certifications To Be There.** With Field Safe, you confidently know the people in a given geofence have the training and accreditation to safely be there.

Field Safe has a number of solutions designed to keep workers connected and safe, while optimizing your operations and lowering costs. **Learn more by visiting our website or call us at 1-800-497-7614.**

Lone Worker Monitoring – With Field Safe, your workers are never truly alone. Know where your people are; understand what they are working on; keep them safe and connected.

Real-Time Documentation – Easy data capture from any mobile device drives user adoption, faster completion of forms, and results in more accurate data being collected.

Journey Management – Assess and track your workers' journeys to identify the level of risk, mitigate potential in-transit threats, and quickly respond to incidents.

Safety Ticket Management – Manage and understand the status of your workers' certifications and training. Set up reminders to ensure their expertise is current.

Task Completion Workflow – Assign tasks, monitor progress, and see overdue items in real-time.
