

Real Safety starts at the top and Helix IT is a great example. Their top priority is the health and safety of employees but also customers, job sites, the public and the environment. Leadership has set a goal to be an industry leader in HSE and an injury and incident-free workplace. They have solid health and safety, and environmental policies complete with commitments that are measured, with appropriate actions and improvements implemented as needed.

**Helix IT has also embraced a best-in-class EHS solution (yes, Field Safe) to support their goal.**

**Read on to learn more about the Helix IT and Field Safe partnership.**

## Field Safe's All-in-One Safety Platform Chosen by Helix IT to Improve Worker Safety

With implementation having just begun, this IT provider is already seeing administrative time savings of 15 hours per week.

### The Challenge:

Helix IT has a number of field workers who must travel great distances to work sites. Existing safety processes were ineffective and not only jeopardized worker safety but also created hours of administrative support time managing and rekeying forms. Helix IT wanted a solution that would resolve these issues and support their goal to be an industry leader in HSE and an injury and incident-free workplace. They turned to Field Safe.

### The Solution:

Field Safe is the health and safety platform of choice for a company where Helix IT installed cable. They were introduced to our platform including our Lone Worker Monitoring, Journey Management and Real-time Documentation solutions on our mutual client's site and liked what they saw. The fact that a major EPC had selected our health and safety solution was especially compelling as were the additional benefits a digital solution provides including:

- Improved employee and contractor safety
- Reduced time spent on the administration of paperwork
- Support of their goal of being an HSE leader
- Impact on the ability to win future work from companies for whom proving a strong safety culture is a requirement for awarding contracts.

### The Results:

To date, only one half of Helix IT's field worker forms have been digitized and 1/3 of the total workforce set up to use the solutions but already time savings are being realized.

**"I estimate I'm saving 15 hours a week already in administrative time, applying those hours to higher value projects that will get us to our goal of being an industry leader in health and safety" says Cody Trendall, Helix IT's Manager of EHS. "I expect that trend to continue as we finish the implementation and roll out."**

### Next Steps:

We will soon complete the digitization of Helix IT's remaining forms and the roll out to the rest of the team. Focus will then turn to ensuring they are taking advantage of their investment in our solutions and reaping the full benefit. Of special note is the opportunity to shorten sales cycles and win more business that having a strong safety culture creates.
